Problem Statement:

What is the Problem?

People in the CS and Engineering field often spend most of their time in their caves on their computers and tend to not be as outgoing or socialize as much as they should.

Who is experiencing the problem?

CS and Engineering students as well as those working in those fields.

Where does the problem present itself?

These students and workers often don't socialize with their peers/friends or are not as likely to be outgoing enough to socialize.

Why does it matter?

Humans are a social species and (normally) require some sort of interaction with one another, but by throwing themselves into their work, these CS/Engineering students and workers disregard that fundamental aspect of humanity and need another way to connect with those of like minds.
